Source and governance record

Controlled source content was inspected from the supplied question paper, current mark scheme and (for Listening) the approved transcript. Source paths and SHA-256 hashes are recorded below. Keep Listening and Reading marks separate: calculate each percentage independently (Listening/50 and Reading/60), then average the two percentages for Paper 1; do not pool raw marks. All responses and marks in this pack are fictional and proposed; no human approval is implied.
