IQM3002 A2 Teacher Reference

Fictional AI-generated internal material for proposed marking and teacher exercise use. Not a candidate submission or human standardisation outcome.

Research question: To what extent does social media use affect subjective well-being in young adults?

Controlled sources: IQM3002_A2_2026-S_Candidate Task Brief.pdf — SHA-256 c3eaa3bc74155a6c60d5cc793347ee90c120e92783f9a1e885190c7e62e6dc05; IQM3002_A2_2026-S_Assessment Rubric.pdf — SHA-256 0a987f6eaf5dbfa928bbf3b25e6946d1b680ceaacd963955b0bc3ee89bea1be4.

This reference gives proposed commentary for the three fictional AI-generated scripts. It links directly to the complete response pack and is intended to support discussion, not replace human marking.

Controlled assessment sources used in this pack: IQM3002_A2_2026-S_Candidate Task Brief.pdf — SHA-256 c3eaa3bc74155a6c60d5cc793347ee90c120e92783f9a1e885190c7e62e6dc05; IQM3002_A2_2026-S_Assessment Rubric.pdf — SHA-256 0a987f6eaf5dbfa928bbf3b25e6946d1b680ceaacd963955b0bc3ee89bea1be4. The complete fictional scripts are in IQM3002_A2_Internal_responses.docx under the profile headings Strong script, Middle script and Weaker script.

Strong script commentary

Combined pack profile heading: Strong script. Response-only word count: 2549.

The response defines scope, distinguishes active and passive use, compares methods and keeps adolescent and broader digital-technology evidence as boundary evidence. Its thesis is sustained, though repeated concluding moves constrain AO4. Proposed marks: AO2 49/60; AO4 72/90; total 121/150 (80.6666666667%, A*).

Middle script commentary

Combined pack profile heading: Middle script. Response-only word count: 2533.

The response generally understands the studies, compares sources and recognises method and scope limits, although its organisation is repetitive and some comparisons arrive after source-by-source explanation. Proposed marks: AO2 38/60; AO4 54/90; total 92/150 (61.3333333333%, B).

Weaker script commentary

Combined pack profile heading: Weaker script. Response-only word count: 2533.

The response identifies the broad direction of findings but overgeneralises claims such as “mostly negative” and moves quickly from association to cause. It recognises design and scope limits and makes some comparisons, but it deliberately confuses loneliness and depression with subjective well-being and incorrectly treats Hunt as evidence about all platforms. Proposed marks: AO2 27/60; AO4 42/90; total 69/150 (46%, D).
